Using PlantMaster on a Rainy or Snowy Day

Fine-tune PlantMaster with changes to the database!

Greetings!

When you are back in your office or unable to be outside due to inclement weather, spend some time with **PlantMaster** so it becomes **your** database!

How to customize the database

Add plants to **PlantMaster** that are **NOT** in the database. We will never have all the plants in the database please add more!

Add pictures to **PlantMaster**. If you have a newer version of **PlantMaster**, it is easy to add, delete or change the order of pictures. With older versions of **PlantMaster**, adding pictures is still possible; it just takes more time to do so.

Examine the data record for those plants you use often in your designs. Change the information through "**edit plant**". Your clients will have more accurate reports available and you can do more exacting plant searches.

NOTE: For those users who scrutinize many plant data records, it is important to create a project first (name your project **edited**

plants). Then start adding those plants whose data records you will change. After making changes to the plant records, use the global marking tool to create a custom field called **edited plant records**. If you do this procedure, you will know which plant records were edited.

SECOND AND LAST NOTE: If you need to review how to add plants, add new pictures or make changes to the data records, you can receive comprehensive on-line training from Anne which will help you get a fast start or refresh your memory for a nominal fee. You are also welcome to email or call with a question.

GardenSoft's current versions: **GardenWorks 3.0; PlantMaster 6.71** California, Northwest, Southwest and National. **Have a great Thanksgiving!**

Sincerely,

Anne Chilcott
